To whom it may concern,

Wreckers Dismantling (Cape) was appointed by Tronox to perform the demolition of a Concentrator Plant at our Hillendale Mine near Richards Bay. The work was performed between November 2016 and February 2017

Demolition activities included the removal of steel building, various steel and concrete structures, piping, buildings and a thickener tank. Wreckers took over the work after a previous contract was terminated as result of a safety incident and safe completion of the work was the highest priority, a number of safety inspections and audits were held by both Tronox and the Department of Mineral Resources without any major findings.

The Wreckers team had no safety incidents, were highly experienced, very professional and required very little effort to manage.

I would recommend them for any similar work.

Yours sincerely,

Carl Erasmus  
Asset Improvement Engineer
